

A Level

In year 12, our curriculum focuses on increasing the skill and knowledge level from GCSE. This is done through theory delivery linked to practical skills. The main project emulates the NEA, giving students the opportunity to practice the required skills. Students are then able to receive extensive feedback to support them in Year 13. In Year 13, lesson time primarily focuses on completion of the NEA, where students decide their own context, and from there design and make their own product prototype.
